PROFILE

Full stack-focused Software Engineer experienced in building scalable, end-to-end web applications using modern technologies. Skilled in frontend and backend development, with a focus on building performant, maintainable, and production-ready solutions. Strong in translating complex requirements into efficient systems while continuously strengthening technical expertise.

EDUCATION

Kumaraguru College Of Technology — **Coimbatore, India**
Bachelor of Engineering in Computer Science and Engineering — **May 2027**
Concentrations: Full stack Development, Web Technologies, Cloud Computing, System Design, Operating Systems, DBMS, OOPS.

- CGPA:7.1/10.

PROJECTS

GigFlow – Smart Lead Management Dashboard | MERN Stack, TypeScript

- Developed a full-stack CRM dashboard using React, TypeScript, Node.js, Express.js, and MongoDB for managing sales leads with secure JWT authentication and role-based access control.
- Implemented CRUD operations, search, filtering, pagination, and CSV export features to improve data management and user productivity.
- Deployed the frontend on Vercel and backend on Render, enabling scalable access and production-level application delivery.
  Frontend Backend Loom Presentation

Smart Campus Issue & Asset Management Platform | React, Node.js/Django, MongoDB, MySQL

- Built a role-based full-stack platform for campus issue tracking and asset management with real-time ticketing, SLA escalation, and analytics dashboards.
- Developed secure workflows for issue reporting, tracking, and resolution to improve operational efficiency and resource management.
- Integrated analytics and database systems to provide real-time insights and support scalable campus operations.

Smart Inventory Management & Return Reduction System | Python, XGBoost, Streamlit, Cloud

- Developed an AI-driven inventory optimization system using XGBoost for demand forecasting and return prediction on 30K+ records to reduce stockouts and minimize losses.
- Built an interactive Streamlit dashboard for real-time analytics, inventory insights, and business decision support.
- Deployed cloud-based workflows to improve scalability and optimize inventory planning for fashion e-commerce operations.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, JavaScript
Frameworks: Node.js, Express.js, React (Basic), Flask (Basic), Django (Basic)
Databases: MySQL, MongoDB, PostgreSQL
Cloud Technologies: AWS, Azure (Fundamentals)
Tools: Git, GitHub, VS Code, IntelliJ IDEA, Eclipse
Web Technologies: HTML, CSS, JavaScript
Concepts: Full Stack Development, REST APIs, Authentication (JWT), Role-Based Access Control (RBAC), Cloud Computing

Research Publication – IEEE Conference | UAV-Based Precision Agriculture System

- Designed and optimized UAV flight trajectories to improve data collection efficiency and coverage in precision agriculture environments.
- Integrated wireless sensor networks for real-time monitoring, enabling intelligent decision-making and enhanced field analysis.
- Evaluated system performance to improve energy efficiency, coverage optimization, and agricultural productivity through data-driven approaches.
